

INFLUENCER AGENCY SIMULATOR · SEED ROUND

BLOGHOUSE RIVALS

The game is live on Google Play. App Store release is expected by late summer 2026. Engagement metrics are in. What remains: switch on monetization and scale.

Live on Google Play · App Store by

What we are building

Bloghouse Rivals is a hybrid of simulation and strategy: players manage a content creator house, upgrade studios and grow a media empire. Fallout Shelter x The Sims x the influencer economy.

The key differentiator: AI-generated UGC and revenue-share collaborations with real influencers.

Round 2 (seed)

up to \$1,000,000

at a \$5M post-money valuation

Round opens in June and closes in August 2026. Use of funds: 50% marketing / 50% development.

TEAM

A team with hit-building experience

Filipp Sizar Mischenko

Founder & CEO

Key role at Artstorm (Modern Warships): marketing, BD and operations, growing from a ~\$1M launch to a \$100M valuation in one year

CMO/CBDO of Drive Zone Online: \$22M ARR, 100M+ installs, #4 top-grossing racing game within 12 months

Stas Pleshchev

Co-founder & CPO

16+ years in gamedev and IT: business development and team management

Co-founder and CEO of full-cycle studio DECARTEL, a veteran development team with 15+ years of experience

Ilya Moskin

Producer

COO at Talerock, producer at XimaD

Lead game designer at PlayFlock, game designer at Game Insight, with decades of F2P and live-ops experience

\$100M

Artstorm valuation in 1 year

100M+

Market: three growth waves converge in one spot

The game sits at the intersection of mobile gaming, the creator economy and AI content, and each of these markets is growing.

Sources: Newzoo 2025, Grand View Research 2026, Mordor Intelligence 2026

53%

of mobile gamers are women (SQ Magazine, 2025). Our audience is girls 13-35: the core of the simulation genre

#1 by downloads

simulation is the most-downloaded mobile genre: 20% of all downloads (Sensor Tower, 2024)

\$800M+

combined revenue of the top 10 social-gaming and visually similar titles (AppMagic)

90%

of developers already use generative AI in workflows (Google Cloud, 2025), so our approach has become an industry norm

PRODUCT

Product: the house where content is born

Players assemble a team of bloggers, furnish studio rooms and balance their stars' ambitions, turning a starter house into a media empire.

Genre. A tycoon-strategy hybrid: resource management + follower-growth challenges

AI-generated UGC. A built-in generator visualizes progress: players create posts and videos and share them on real social media

Real influencers. Revenue-share collaborations: safe monetization of an influencer's audience and our cheapest UA channel

Live-ops content. Rooms, characters, story events and seasons: a content pipeline accelerated by generative AI

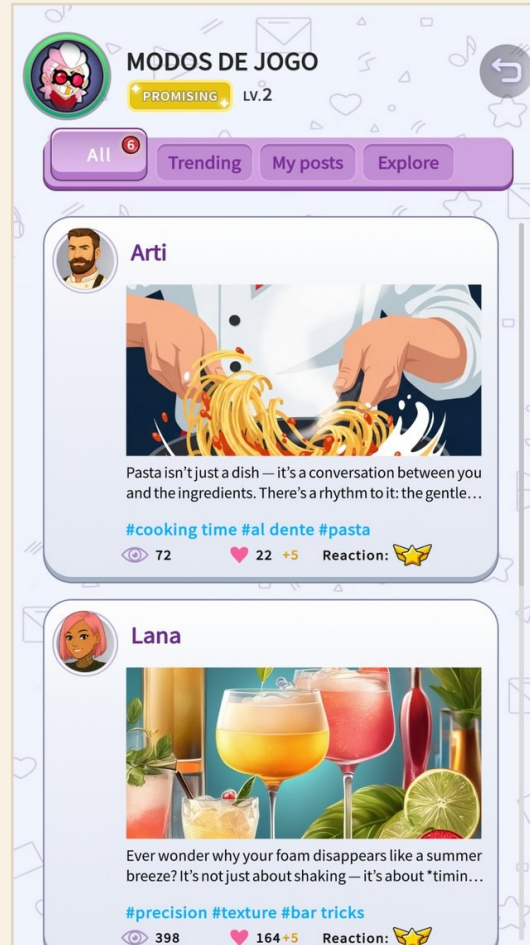

Content house: beauty, podcasts, garage, kitchen, geek room

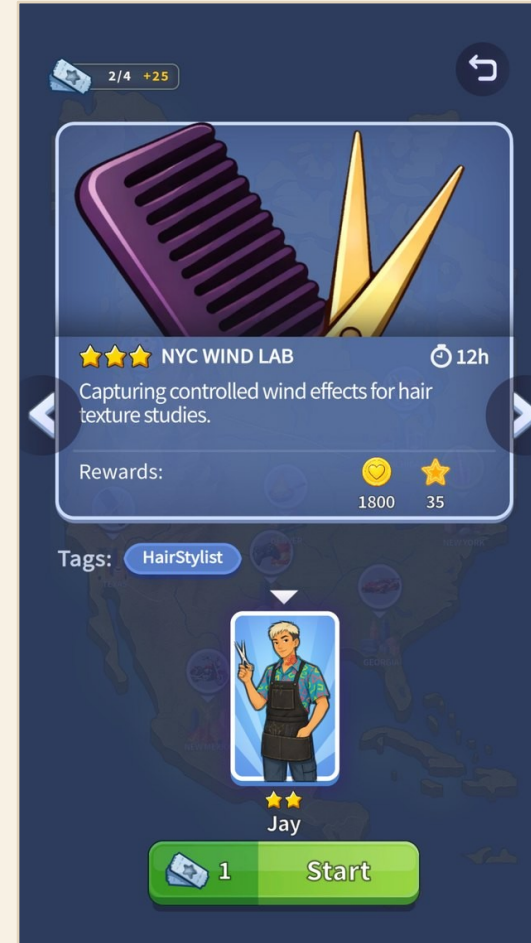

Game on Google Play: release screenshots

Tycoon house: room upgrades

AI post feed (UGC)

Blogger expeditions and tasks

Already in production

Core tycoon loop: rooms, upgrades and blogger management

Built-in AI feed: characters publish generated posts

Expeditions, tasks and character progression

Live engagement metrics are collected from real players

TRACTION

The game is live, and the metrics are real

Last round we promised a playable product. It is now live on Google Play, with App Store release expected by late summer 2026. Today an investor is buying not an idea, but a working game with live engagement metrics.

20+ minutes

of playtime per day (US)

The average mobile game session is 4-5 minutes (Liftoff, 2025). Our players stay several times longer, before any monetization mechanics.

2.77

sessions per player per day

Players return several times a day. The 'check on your bloggers' pattern works like a social media habit.

\$0.30

CPC in test campaigns

A cheap click on the female casual audience confirms the low-cost traffic hypothesis for the genre.

Monetization is intentionally off: engagement and retention first, revenue second. All metrics above were collected on the raw product.

Monetization is the next step, not a hypothesis

The economy is designed and calibrated against genre benchmarks (AppMagic, Sensor Tower). We switch it on with an update for an already engaged audience.

Gacha mechanics (IAP)

New influencers, boosters and exclusive packs, modeled on the best gacha economies

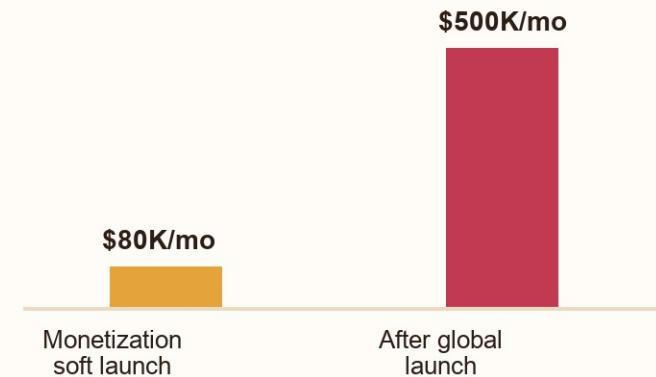

Rewarded ads

Opt-in rewarded videos and native integrations: the dual IAP + ads model maximizes ARPDAU

Web store

After the Epic v. Apple ruling (2025), external payments in the US cost ~3-6% instead of the 30% store fee

Expected gross revenue

ARPPU (US) ~\$20 · AdARPU ~\$0.6. Operational break-even within 3 months of global launch.

AI + UGC: first-mover advantage

First in the niche. No other game combines managing real influencers with AI-generated user content. Fashion simulators and streamer games solve a different problem.

AI cuts content costs. A generative pipeline speeds up art and live-ops content production by 70-90% (Google Cloud, 2025), letting a small team ship at big-studio pace.

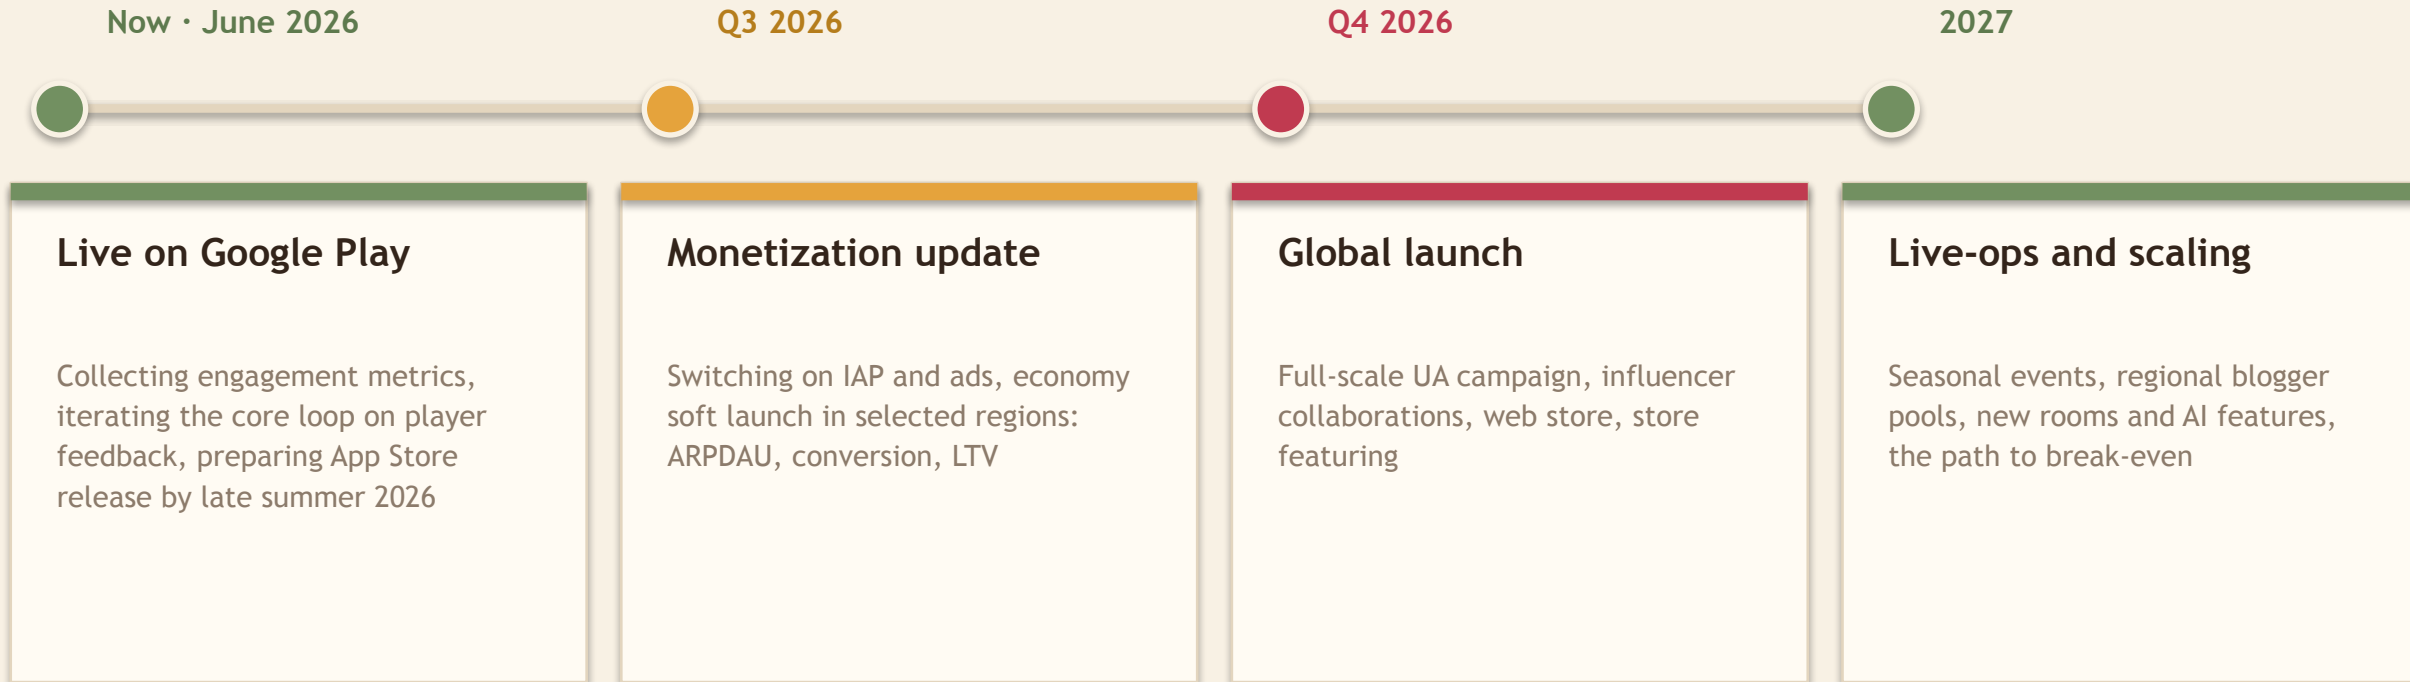

Viral loop. Players create AI posts and videos and publish them on real social media. Every creative becomes free advertising for the game.

Real bloggers = distribution. Revenue-share collaborations bring the most loyal audience at a cost below any paid channel.

Vixen, one of the game characters

Roadmap: global launch this year

The schedule follows the original plan: the milestones are the same, and the product has already passed the key one: shipping to Google Play. App Store release is expected by late summer 2026. Round opens in June and closes in August 2026 so the global launch has full marketing support.

Round: up to \$1M at a \$5M post-money valuation

Terms

up to \$1,000,000

\$5M post-money valuation

Instruments: options / SAFE, open to discussing the deal structure.

Company: Gengames Interactive FZCO, registered in the UAE (Dubai).

Timeline: round opens in June 2026 and closes in August 2026.

Runway: ~12 months, to global launch and operational break-even.

Use of funds: 50 / 50

50% - Marketing

- UA campaigns and creative tests (Meta, TikTok, Google), optimized for ROAS
- Revenue-share collaborations with influencers, the anchor acquisition channel
- Community, PR, store featuring and industry events

50% - Development

- Monetization systems: gacha, offers, web store, LiveOps infrastructure
- Content and art: new rooms, characters, story events, seasons
- AI infrastructure, servers, QA and scaling support

Five reasons to invest now

01

Live product. The game is live on Google Play, getting updates and collecting engagement metrics from real players. App Store release is expected by late summer 2026.

02

Engagement proven by numbers. 20+ minutes of playtime per day (US) and 2.77 sessions per player: metrics at the level of successful simulation games, collected without monetization.

03

Low-cost traffic. CPC \$0.30 in tests + revenue-share collaborations with bloggers: acquisition economics work even before scaling.

04

Team with exits. Artstorm: ~\$1M to \$100M valuation in one year. Drive Zone Online: \$22M ARR and 100M+ installs. We have already taken products from launch to scale.

05

Market timing. Capital in gamedev is flowing into AI and UGC; M&A is at record levels (EA - \$55B, Scopely/Niantic - \$3.5B). Projects at the AI x creator economy intersection are a prime strategic target.

Next: regional pools of bloggers around the world

Localization for us is not only language, but the influencer roster: in every region the game launches with its own stars.

Every regional collaboration is content, marketing and monetization at once: a blogger brings the audience, the audience generates revenue, and revenue is shared.

Cross-platform path: Android now; App Store release expected by late summer 2026; then web and mini-game storefronts (Telegram Mini Apps and others).

Exit potential

The target is growth toward a \$100M valuation: M&A by major publishers and technology companies entering gaming/AI is the most likely exit scenario.

World map from the game: every region has its own content house and heroes

NEXT STEP

Join the round - before the global launch

The round opened in June 2026 and closes in August 2026, so the Q4 global launch ships with full marketing support. A complete financial model, cohort metrics and a live demo are available.
